Threat Intelligence with Generative AI (GAN + Transformer)

Goal: Generate synthetic text-based threat intelligence data using a hybrid GAN + Transformer model and compare it with existing models (DCGAN, WGAN, BERT, SPADE) on various metrics.

Metrics: Accuracy, False Positive Rate, False Negative Rate, Response Time **Libraries**: TensorFlow, Keras, Matplotlib, Numpy

In [ ]:
```
import numpy as np
import tensorflow as tf
from tensorflow.keras import layers
import matplotlib.pyplot as plt
import random
import string
import time
np.random.seed(42)
tf.random.set_seed(42)
```

In [ ]:
```
# Generate synthetic 'threat log' texts
def generate_threat_log():
    attack_types = ['DDoS', 'Phishing', 'Malware', 'Ransomware', 'SQL Injectio
n']
    sources = ['192.168.1.' + str(np.random.randint(1, 255)) for _ in range
(5)]
    logs = []
    for _ in range(1000):
        attack = random.choice(attack_types)
        src = random.choice(sources)
        log = f"Threat detected: {attack} from {src}"
        logs.append(log)
    return logs

logs = generate_threat_log()
for i in range(5): print(logs[i])
```

In [ ]:
```
# Text vectorization
from tensorflow.keras.layers import TextVectorization
